Chan, Christina

Subject:

Rush search for App. #: 10/083,168

Thurman I am seeking approval for a RUSH sequence search for an amended case, as

indicated below. If approved, could you

please forward the search to STIC and cc a copy to me.

Examiner: Nirmal S. Basi

Art Unit 1646

Office: Remsen Building, Room 4D68 Mail Room: Remsen Building, room 4C70

Method for screening for type 2 diabetes mellitus comprises detecting a polymorphism in a calpain encoding nucleic acid segment or a protease-encoding nucleic acid segment.

Claim 75; Page 237-238; 257pp; English.

The present sequence is that of the human gene encoding G protein coupled

us-10-083-168-16.rag

```
receptor, GPR35 as deduced from a composite cDNA (see AAA27485). The sequence of GPR35 is similar to that of a putative purinoceptor PYY9 (a14.14 identity) suggesting that ATP or other nucleotide is its ligand. GPR35 mRNA was detected in all adult and foetal tissues examined with relatively higher levels in adult lung, small intestine, colon and roumach. In these tissues, there are Z major transcripts of 2.4 and 4.4 kb, whereas in skeletal muscle there is a single transcript of 9.4 kb. The GR835 gene is located in a 49,136 bp region (see AAA27475) within the NIDDM1 region of human chromosome 2. This region also includes the CAPN10 gene, which encodes a novel calpain-like cysteine protease, designated calpain 10. Mutations in the CAPN10 gene are responsible for greened to type 2 diabetes calpain-like cysteine protease, designated propensity for type 2 diabetes mellitus are based on detection of a propensity for type 2 diabetes mellitus are based on detection of a propensity for type 2 diabetes mellitus are based on detection of a propensity for type 2 diabetes mellitus are based on detection of a propensity for type 2 diabetes mellitus are based on detection of a propensity for type 2 diabetes mellitus are based on detection of a mudulators to treat diabetes, in particular through the regulation of an insulin secretory response or insulin mediated glucose transport

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; or protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; Lancer; immunological-related cell proliferative disease; autoimmune disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to transmembrane receptors, particularly endogenous human G-protein coupled receptors (GPCRs), mutant (non-endogenous) versions of the GPCRs, and the polymucleotide sequences encoding them. The GPCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NLAVADLCLLCTLPFVLHSLRDTSDTPLCQLSQG1YLTNRYMS1SLVTAIAVDRYVAVRH

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino condition of a particular G acide. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (1) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibodies. The peptides for GPCRs are useful in detecting an antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for creating immune-related diseases, growth-related diseases, call creating immune-related diseases, jemunological-related cell proliferative ciseases, or autoimmune diseases, jemunological-related cell proliferative diseases, or autoimmune diseases, e.g. AlDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, atherosclerosis, bacterial, fungal, protozoan or viral infections, atherosclerosis, bacterial, fungal, protozoan or viral infections, atherosclerosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, disease, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, canxiety, depression, schizophrenia, dementia, mental retardation, memory considering yorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ45531 to ABZ42869 encode condition of the present invention
Alzheimer's disease; atherosclerosis; infection; osteoarthritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma;

The proteins and genes are useful for diagnosis, treatment and prevention of heart failure.

The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases

Claim 151; SEQ ID NO 496; 542pp; English.

```
Sasociated with Garkes of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR gene of the invention; a mouse comprising a compounds useful in the treatment of the invention; a defined of the invention in a different GPCR golymucleous GPCR gene; cells derived from the transgenic mice; kits comprising several mice, each of which has comprising a which hybridise to GPCR polymucleotides of the invention. The invention further discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid; The GPCR polypeptides and vectors comprising a GPCR nucleic acid; The GPCR polypeptides and vectors comprising a GPCR nucleic acid; The GPCR nucleic acids and proteins may be used in the disgnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, distributions of disease or schizophrenia); classification disorders of the adrenal gland; disorders (e.g., Alzheimer's disease, diarrhoea, food poisoning or irritable bowel syndrome); cardiovascular disorders; blood disorders (e.g., angina, cardiac arrhythmia or syndrome); cardiovascular disorders; blood disorders (e.g., another disorders or the disorders or the disorders (e.g., autoimmune disorders or AIDS); bone and joint disorders (e.g., autoimmune disorders or AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid chiesases); and disorders of the kidney, liver, lung, breast, ovary, cobesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases) and disorders of the kidney, liver, lung, breast, ovary, cuterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and chiesase, the kidney, liver, lung, breast, dern part of the present sequence represents a GPCR of the convent of the printed data for this patent did not form part of the convent of the proper of the prop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 NIAVADLCILCTIPPVIHSIRDTSDTPLCQLSQGIYLTNRYMSISLVTAIAVDRYVAVRH 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                         The invention relates to pharmaceutical compositions that comprise an agent that inhibits the expression or activity of a tumour-associated antigen (TAG) that is encoded by a nucleic acid. The pharmaceutical compositions and related compositions, are used for treatment of diseases associated with (abnormal) expression of TAG, specifically cancer e.g. of lung, breast, prostate, colon, stomach, pancreas, ear/nose/throat, kidney or cervix, also melanoma. Compositions containing TAG, or related nucleic acid, antibodies or host cells, are also useful for diagnosis and monitoring of tumours. The present sequence represents the amino acid sequence of a human GPR35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LAVGWNACALLETIRRALYITSKLSDANCCLDAICYYYMAKEFQEASALAVAPRAKAHKS 300

cardiovascular claims to the use of numan G-protein coupled receptor 35 (GRR35) for screening therapeutic agents useful in the treatment of cardiovascular disorders, liver and gastrointestinal diseases, cancer disorders, inflammatory diseases, metabolic diseases, hematological disorders, in a mammal. Great neurological disorders and urological disorders, in a mammal. Great neurological disorders and urological disorders, in a mammal. Great neurological compound with GPR35 polypeptide, and detecting the binding of the test compound with GPR35 polypeptide, and detecting the binding of the test compound to the polypeptide, and detecting the binding of the test compound to the grass polymelectide in a sample taken from the mammal, and determining the amount of the GPR35 polymelectide in healthy and/or diseased mammals of GPR35 polymelectide in healthy and/or diseased mammals. Comparising a therapeutic agent that binds to the GPR35 polypeptide, (3) use of regulators of a GPR35 for the preparation of the pharmaceutical composition or for the regulation of GPR35 activity or a mammal having the above specified diseases; and (4) a method for the graparation of the pharmaceutical composition, comprising identifying the composition of the regulator ameliorates the symptoms of the above specified diseases; and (4) a method for the symptoms of the above specified diseases; and mammal, and combining the regulator, determining whether the regulator ameliorates the symptoms of the above specified diseases in a mammal, and combining the regulator with an acceptable pharmaceutical camposition of GPR35 and diseases, and gastrointestinal diseases, cancer disorders, inflammatory diseases, neurological disorders and urological disorders, respiratory diseases, neurological disorders and urological disorders in a mammal, e.g. humans (preferably), dogs, cats, cows, horses, rabbits, and monkeys. This

The GPCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension, reflux disease, depression, migraine, schizophrenia, ulcers, psychotic disorders, asthma, bronchospasm, ansesthesia, mycardial infarction (MI), stroke, glaucoma, prostatic hyperplasia, epilepsy, prostatic cancer, anxiety, prostatic hypertrophy, rhinitis, and angina. The present sequence represents a mutant human GPCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human G-protein coupled receptor (GPCR), useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to transmembrane receptors, particularly

The present sequence is human receptor-associated protein (HRAP) from Incyte clone 3083742 obtained from OVARTUNOI cDNA library. This sequence is expressed in haemacopoietic/immune, gastrointestinal and reproductive tissues. HRAP has cytostatic, immunomodulatory, antiinflammatory, cardiant, antiatreriosclerotic, hepatotropic, antianthritic, antiathering, antiathering, antiathering, antiathering, antiathering, antiathering, antiathering anticheumatic, osteopathic, antialergic, antianaemic, antiasthmatic, sequence is useful in the diagnosis, treatment and prevention of disorders associated with HRAP expression, especially cell proliferative, dutoimmune/inflammatory, reproductive, cardiovascular and gastrointestinal disorders (e.g. atherosclerosis, cirrhosis, leukaemia, cancer, AIDS, arthritis, allergies, anaemia, asthma, dermatitis, diabetes, osteoporosis, multiple sclerosis and irritable bowel syndrome)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 NLAVADLCLLCTLPFVLHSLRDTSDTPLCQLSQGIYLTNRYMSISLVTAIAVDRYVAVRH 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming cells with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPUV or Enhanced GFP (EGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LAVGWNACALLETIRRALYITSKLSDANCCLDAICYYYMAKEFQEASALAVAPRAKAHKS 300

Specifically, it comprises transformation of endocrine cell lines originating from mammalian hypothalamus and pancreatic islets, culturing the transformant and contacting with cells expressing the target receptor. The identification of those cells with a response traction can be used for selecting a transformant cell line with the appropriate target activity that is expressing the novel transformed DNA. Accordingly, the present invention describes novel cell lines that are applicable in expression cloning systems of bloactive peptide precursor genes, and in screening GPCR ligands for use as drugs including agonists antagonists and inverse agonists i.e. activators and inhibitors. Such ease ay system. This polypeptide sequence is the human GPCR ligand assay system. This polypeptide sequence is the human GPCR ligand mutein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel method for obtaining a DNA that encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Endocrine cell lines originated from mammalian hypothalamus and pancreatic islet, applicable in expression cloning systems of bioactive peptide precursor genes, and in screening G protein-coupled receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            H
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MNGTYNTCGSSDLTWPPAIKLGFYAYLGVLLVLGLLINSLALWVFCCRMQQWTETRIYMT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents human GPR35A, a novel member of the purinergic family of polypeptides and a G-protein coupled receptor. The invention provides GPR35A polypeptides having at least 70% identity with the present sequence, GPR35A polymucleotides, recombinant materials, and methods for their production. GPR35A polypeptides can be used for identifying agonists and antagonists/inhibitors, and for detecting diseases associated with inappropriate GPR35A activity or levels. GPR35A polypeptides and polymucleotides, agonists, antagonists and antibodies are used to treat: infections such as bacterial, fungal, protozoan and viral infections, particularly HIV-1 and HIV-2; pain; cancer; diabetes;

```
The invention relates to a novel method for determining if a nucleic acid is a marker for a predetermined phenotype/cell type of interest from a biological species. The method comprises performing a global comparison of a group of expressed sequence tags (BSTB) known to be expressed in the phenotype/cell type of interest with all BSTB expressed in normal tissue in order to identify BSTB that are preferentially expressed in the phenotype/cell of interest. A method of the invention is useful for determining whether a nucleic acid is a marker for a predetermined phenotype or cell type of interest from a biological species, preferably arabidopsis or human. The cell type of interest is an abnormal cell such as a tumour cell, and the predetermined phenotype is a stress-induced phenotype such as hyperosmotic stress or high salt conditions. A method of phenotype such as hyperosmotic stress or high salt conditions. A method cancer in a human, for detecting a tumour cell, and for regulating or preventing the growth of a tumour cell. An antibody of the invention is useful expression for tumour-associated markers. A polypeptide of the invention is useful as an immunogen for vaccinating an animal. The present sequence represents a cumour-associated antigen of the invention.
Determining if a nucleic acid is a marker for a phenotype/cell type of interest, by global comparison of expressed sequence tags known to be expressed in the phenotype/cell type with all ESTs expressed in normal
                                                                                                                                                      Claim 29; Page 448-449; 516pp; English.

The invention relates to pharmaceutical compositions that comprise an agent that inhibits the expression or activity of a tumour-associated artigen (TAg) that is encoded by a nucleic acid. The pharmaceutical compositions and related compositions, are used for treatment of diseases associated with (abnormal) expression of TAg, specifically cancer e.g. of lung, breast, prostate, colon, stomach, pancreas, ear/nose/throat, kidney or cervix, also melanoma. Compositions containing TAg, or related nucleic acid, antibodies or host cells, are also useful for diagnosis and monitoring of tumours. The present sequence represents the amino acid sequence of a human GPR35.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
